After a thorough renovation the 'Scheepjeshof' in Veenendaal has turned into a modern contemporary shopping mall. Octatube was given the opportunity to do the engineering, manufacturing and installation of the glass canopy of 200 m<sup>2</sup> and of the glass facade of 65 m<sup>2</sup> for this project. The glass is made of clear tempered insulating glass in the facade and clear tempered glass in the canopy. The glass panels are mechanically attached to the steel structure by molded Duo knots with an adjustable screw connection.
